Dek-O-Bed

A Unique Solution For the most critical situations

Emergency and humanitarian Aid often demands immediate and unique care for people in everchanging situations. The Dek-O-Bed was specifically designed to meet the challenges of the decontamination or cleaning of persons that cannot stand. Whether fighting infectious disease or battling exposures to hazardous substances and chemicals, the Dek-O-Bed provides a unique solution.

- **A unique solution.** The Dek-O-Bed with Duraskin has a German fabricated PVC coated mat with Acrylic lacquer top coat, making it tear and water resistant. The mat is free of phthalates.
- **Extreme Hygiene.** The Dek-O-Bed's Duraskin mat allows for easy decontamination or bathing of sick patients who cannot stand up. The welded mat eliminates thread and sew lines and features multiple small holes that allow liquids to drain easily.
- **Cleaning is Simple.** Both the bed and the mat can easily be disinfected. Simply dip or spray a chlorine solution on the bed for quick and easy sanitization without having to worry about product wear and tear.
- **Strong and Comfortable Support.** The Dek-O-Bed is extremely durable and has a weight tolerance of 227 kg. At a bed height of 41cm, patients can easily be treated and lie comfortably.
- **Easy to Assemble and Pack Away.** Disc-O-Bed®'s patented disc system allows for a quick, no-tool assembly. When not in use, the bed is easily packed into its included carry bag for storage or transport.
- **When Mobility is Limited.** The Dek-O-Bed with Duraskin is the go to solution for aid organizations, first responders, or any group that needs to be prepared for accidents and disasters involving the need for decontamination of non-ambulatory people. This includes chemical spills and other exposures to harmful substances.
